Early Snowflake	\$3.50
St Chas. White (Red Cob)	3.00
Iowa Silver Mine	3.00
Boone Co. White	3.00
White Pearl	3.00
Early Ivory, 90 days	3.00

CANE SEED BAGS INCLUDED

Sow 20 to 30 lbs. to Acre	Per Bu. (50 lbs.)
Amber	\$2.00
Orange	2.00
Mixed for Fodder	1.75

MILLET, Mo. Per Bu. (50 lbs.)

\$2.00

ORCHARD GRASS BAGS INCLUDED

Sow 40 to 45 lbs. to Acre	Per 100
AGRI	22.50

VETCH-RAPE BAGS INCLUDED

Winter Hairy Vetch	12.50
Dwarf Essex Rape	10.00

NOTICE:—We pay the FREIGHT to your station on orders totaling 100 pounds or more, buyer's assortment. Orders for less than 100 pounds, prices are f. o. b. St. Louis. For Example: 50# Clover and 50# Timothy total 100 lbs. or any other items you may make your own selection. WE PAY FREIGHT AND INCLUDE BAGS.

FREIGHT PAID on 100 Lb. Orders (Buyer's Assortment)

BAGS INCLUDED

FACTS CONCERNING NORTHERN VARIEGATED ALFALFA

The government and state agricultural authorities have been advocating that every farmer should have in a field of Alfalfa. Every farmer has an ambition to grow Alfalfa but is perplexed by the various varieties to use in his district.

We have made extensive investigations on the Alfalfa situation, having for the past several years been selling Grimm and other varieties of known origin, but we have been giving great attention to the Northern Variegated. This Alfalfa has proven by tests conducted by the very best agricultural experts, both in the United States and Canada, as being one of the hardiest Alfalfas in existence today. As a matter of fact, many of these agricultural advisers, based on experience covering many years, are now advocating and endorsing the Variegated as being entirely suitable for the average farm condition and in every way equal both in hardiness and production to the Grimm.

Before our service department would endorse this statement we made extensive researches and now are in accord with this recommendation and believe we are the first seed house who are offering the Northern Variegated as being entirely in the front rank with the Grimm. By exhaustive test this has proven itself to be compared only with the Grimm.

The Northern Variegated Alfalfa is produced in the region located in the Great Lakes District, which have very vigorous and severe winters the ground freezing without any snow early in the season, and the Northern Variegated has come through, some of the fields known to be in existence twenty five years or longer. It derives its name from the variation of colors in the blossom. The blossoms range from a light blue to a dark purple having intermediate colors of brown, yellow and red. It also has the characteristics of side roots as well as tap roots.

In exhaustive tests made in New York and other northern states it has been yielding as much as the Grimm, producing a hay of equal value. In many instances over a period of years it has produced a larger tonnage of hay than the Grimm. The price is much less than the Grimm and is within the reach of every farmer who wants a crop produced by dependable seed. The seed we are offering is 99 per cent or better pure and we take pleasure in earnestly recommending it to every farmer.

If you are interested in putting in a field of Alfalfa this season, kindly get in touch with our service department, giving us the full details of your contemplations, the kind of ground, the way it lays as to the morning sun, drainage, and the like. Our service department covering over a half century of actual experience on field crops is at your command and it is up to you to use it for better results.

Our seed is new crop, 95 per cent germination, 99 per cent or better pure. We recommend not less than 15 lbs. to acre and not over 20 lbs. to acre.

Alfalfa thrives best on well drained land of reasonable fertility and land that is free from acid content. Bacteria which assists Alfalfa needs sweet soil. We recommend Farmogerm cultures to inoculate all Alfalfa and clovers.

Per bushel, **\$16.00** Per 100 lbs., **\$26.50** 500 lbs., **\$26.00**

AGRICULTURAL SEED COMPANY
ST. LOUIS, MISSOURI

Estimate Your Own Yield

What will be the yield per acre if each hill bears a medium sized ear (12 oz.) on every stalk? Below is a copy of a chart prepared by the Illinois College of Agriculture.

CORN PLANT'D	STALKS Per HILL	STALKS Per ACRE	IF EACH HILL BEARS	The Yield Will be
3½x3½ Ft.	1	3556	One 2 oz. ear 	6¼ bu.
"	1	3556	One 4 oz. ear 	12½ bu.
"	1	3556	One 6 oz. ear 	19 bu.
"	1	3556	One 8 oz. ear 	25¼ bu.
"	1	3556	One 10 oz. ear 	31¼ bu.
"	1	3556	One 12 oz. ear 	38 bu.
"	1	3556	One 14 oz. ear 	44¼ bu.
"	1	3556	One 16 oz. ear 	50¼ bu.
"	1	3556	One 18 oz. ear 	57 bu.
"	2	7112	One 12 oz. and one 8 oz. ear 	63¼ bu.
"	2	7112	One 16 oz. and one 6 oz. ear 	69¼ bu.
"	2	7112	One 14 oz. and one 10 oz. ear 	76¼ bu.
"	2	7112	Two 14 oz. ears 	89 bu.
"	2	7112	One 16 oz. and one 14 oz. ear 	95 bu.
"	3	10668	Two 14 oz. and one 6 oz. ear 	108 bu.
"	3	10668	Three 12 oz. ears 	114 bu.
DRILLED	1 STALK EVERY 14 INCHES	10667	One 12 oz. ear 	114½ bu.
DRILLED	1 STALK EVERY 16 INCHES	9324	One 14 oz. ear 	116 bu.

Ear Corn Versus Shelled Corn

We are sometimes asked what the difference is between our ear and shelled corn. The ear corn and shelled corn come from the same fields, receive the same attention in breeding, are selected with the same care, dried and stored in the same way. There is no difference between them in yielding quality; the seed of our shelled corn will produce just as many bushels per acre as the seed of our ear corn. In fact there are two advantages in the shelled corn. The butts and tips of the ears have been shelled off and you get the full bushel ready to plant, and the corn has been graded into large, medium and small-sized kernels, insuring a uniform drop in the planter. One bushel of the shelled corn will plant about eight acres while one bushel of the ear corn, after butts and tips have been removed, will plant about six acres. That is, the shelled corn will plant 33½ per cent more ground.
